

Charlie Maclean

Synthesis of Heart-Rate Detection Methods

Computer Science Tripos – Part II

King's College

December 18, 2019

Proforma

| | |
|---------------------|---|
| Name: | Martin Richards |
| College: | St John's College |
| Project Title: | How to write a dissertation in L^AT_EX |
| Examination: | Computer Science Tripos – Part II, July 2001 |
| Word Count: | 1587¹ (well less than the 12000 limit) |
| Project Originator: | Dr M. Richards |
| Supervisor: | Dr Markus Kuhn |

Original Aims of the Project

To write a demonstration dissertation² using L^AT_EX to save student's time when writing their own dissertations. The dissertation should illustrate how to use the more common L^AT_EX constructs. It should include pictures and diagrams to show how these can be incorporated into the dissertation. It should contain the entire L^AT_EX source of the dissertation and the makefile. It should explain how to construct an MSDOS disk of the dissertation in Postscript format that can be used by the book shop for printing, and, finally, it should have the prescribed layout and format of a diploma dissertation.

Work Completed

All that has been completed appears in this dissertation.

Special Difficulties

Learning how to incorporate encapsulated postscript into a L^AT_EX document on both Ubuntu Linux and OS X.

¹This word count was computed by `detex diss.tex | tr -cd '0-9A-Za-z \n' | wc -w`

²A normal footnote without the complication of being in a table.

Declaration

I, [Name] of [College], being a candidate for Part II of the Computer Science Tripos [or the Diploma in Computer Science], hereby declare that this dissertation and the work described in it are my own work, unaided except as may be specified below, and that the dissertation does not contain material that has already been used to any substantial extent for a comparable purpose.

Acknowledgements

This document owes much to an earlier version written by Simon Moore [2]. His help, encouragement and advice was greatly appreciated.

Chapter 1

Introduction

1.1 Overview of the files

This document consists of the following files:

- `makefile` — The makefile for the dissertation and Project Proposal
- `diss.tex` — The dissertation
- `figs` — A directory containing diagrams and pictures
- `refs.bib` — The bibliography database

1.2 Building the document

This document was produced using \LaTeX 2 ϵ which is based upon \LaTeX [1]. To build the document you first need to generate `diss.aux` which, amongst other things, contains the references used. This is done by executing the command:

```
pdflatex diss
```

Then the bibliography can be generated from `refs.bib` using:

```
bibtex diss
```

Finally, to ensure all the page numbering is correct run `pdflatex` on `diss.tex` until the `.aux` files do not change. This usually takes 2 more runs.

1.2.1 The makefile

To simplify the calls to `pdflatex` and `bibtex`, a makefile has been provided, see Appendix B.1. It provides the following facilities:

```
make
```

Display help information.

```
make proposal.pdf
```

Format the proposal document as a PDF.

`make view-proposal`

Run `make proposal.pdf` and then display it with a Linux PDF viewer (preferably “okular”, if that is not available fall back to “evince”).

`make diss.pdf`

Format the dissertation document as a PDF.

`make count`

Display an estimate of the word count.

`make all`

Construct `proposal.pdf` and `diss.pdf`.

`make pub`

Make `diss.pdf` and place it in my `public.html` directory.

`make clean`

Delete all intermediate files except the source files and the resulting PDFs. All these deleted files can be reconstructed by typing `make all`.

1.3 Counting words

An approximate word count of the body of the dissertation may be obtained using:

```
wc diss.tex
```

Alternatively, try something like:

```
detex diss.tex | tr -cd '0-9A-Z a-z\n' | wc -w
```

Chapter 2

Preparation

This chapter is empty!

Chapter 3

Implementation

3.1 Verbatim text

Verbatim text can be included using `\begin{verbatim}` and `\end{verbatim}`. I normally use a slightly smaller font and often squeeze the lines a little closer together, as in:

```
GET "libhdr"

GLOBAL { count:200; all  }

LET try(ld, row, rd) BE TEST row=all
      THEN count := count + 1
      ELSE { LET poss = all & ~(ld | row | rd)
            UNTIL poss=0 DO
              { LET p = poss & -poss
                poss := poss - p
                try(ld+p << 1, row+p, rd+p >> 1)
              }
            }

LET start() = VALOF
{ all := 1
  FOR i = 1 TO 12 DO
  { count := 0
    try(0, 0, 0)
    writef("Number of solutions to %i2-queens is %i5*n", i, count)
    all := 2*all + 1
  }
  RESULTIS 0
}
```

Figure 3.1: A picture composed of boxes and vectors.

3.2 Tables

Here is a simple example¹ of a table.

| Left Justified | Centred | Right Justified |
|-------------------|---------|--------------------|
| First | A | XXX |
| Second | AA | XX |
| Last | AAA | X |

There is another example table in the proforma.

3.3 Simple diagrams

Simple diagrams can be written directly in \LaTeX . For example, see figure 3.1 on page 14 and see figure 3.2 on page 15.

3.4 Adding more complicated graphics

The use of \LaTeX format can be tedious and it is often better to use encapsulated postscript (EPS) or PDF to represent complicated graphics. Figure 3.3 and 3.5 on page 16 are

¹A footnote

Figure 3.2: A diagram composed of circles, lines and boxes.

examples. The second figure was drawn using `xfig` and exported in `.eps` format. This is my recommended way of drawing all diagrams.

Figure 3.3: Example figure using encapsulated postscript

Figure 3.4: Example figure where a picture can be pasted in

Figure 3.5: Example diagram drawn using `xfig`

Chapter 4

Evaluation

4.1 Printing and binding

Use a “duplex” laser printer that can print on both sides to print two copies of your dissertation. Then bind them, for example using the comb binder in the Computer Laboratory Library.

4.2 Further information

See the Unix Tools notes at

<http://www.cl.cam.ac.uk/teaching/current-1/UnixTools/materials.html>

Chapter 5

Conclusion

I hope that this rough guide to writing a dissertation in L^AT_EX has been helpful and saved you time.

\chapter{Introduction}

\section{Overview of the files}

This document consists of the following files:

```
\begin{itemize}
\item \texttt{makefile} --- The makefile for the dissertation and
                          Project Proposal
\item \texttt{diss.tex} --- The dissertation
\item \texttt{figs} -- A directory containing diagrams and pictures
\item \texttt{refs.bib} --- The bibliography database
\end{itemize}
```

\section{Building the document}

This document was produced using \LaTeXe which is based upon
 \LaTeX\cite{Lamport86}. To build the document you first need to
 generate \texttt{diss.aux} which, amongst other things, contains the
 references used. This is done by executing the command:

```
\texttt{pdflatex diss}
```

\noindent

Then the bibliography can be generated from \texttt{refs.bib} using:

```
\texttt{bibtex diss}
```

\noindent

Finally, to ensure all the page numbering is correct run \texttt{pdflatex}
 on \texttt{diss.tex} until the \texttt{.aux} files do not change. This
 usually takes 2 more runs.

\subsection{The makefile}

To simplify the calls to \texttt{pdflatex} and \texttt{bibtex},
 a makefile has been provided, see Appendix~\ref{makefile}.
 It provides the following facilities:

```
\begin{description}
```

```
\item \texttt{make} \\\
```

Display help information.

```
\item \texttt{make proposal.pdf} \\\
```

Format the proposal document as a PDF.

```
\item \texttt{make view-proposal} \\\
```

Run \texttt{make proposal.pdf} and then display it with a Linux PDF viewer
 (preferably ‘okular’, if that is not available fall back to ‘evince’).

```
\item \texttt{make diss.pdf} \\\
```

Format the dissertation document as a PDF.

```
\item \texttt{make count} \\\
```

Display an estimate of the word count.

```
\item \texttt{make all} \\\
```

Construct \texttt{proposal.pdf} and \texttt{diss.pdf}.

```

\item\texttt{make pub} \ Make \texttt{diss.pdf}
and place it in my \texttt{public\_html} directory.

\item\texttt{make clean} \ Delete all intermediate files except the
source files and the resulting PDFs. All these deleted files can
be reconstructed by typing \texttt{make all}.

\end{description}

\section{Counting words}

An approximate word count of the body of the dissertation may be
obtained using:

\texttt{wc diss.tex}

\noindent
Alternatively, try something like:

\verb|detex diss.tex | tr -cd '0-9A-Z a-z\n' | wc -w/

\chapter{Preparation}

This chapter is empty!

\chapter{Implementation}

\section{Verbatim text}

Verbatim text can be included using \verb|\begin{verbatim}| and
\verb|\end{verbatim}|. I normally use a slightly smaller font and
often squeeze the lines a little closer together, as in:

{\renewcommand{\baselinestretch}{0.8}\small
\begin{verbatim}
GET "libhdr"

GLOBAL { count:200; all  }

LET try(ld, row, rd) BE TEST row=all
      THEN count := count + 1
      ELSE { LET poss = all & ~(ld | row | rd)
            UNTIL poss=0 DO
              { LET p = poss & -poss
                poss := poss - p
                try(ld+p << 1, row+p, rd+p >> 1)
              }
            }

LET start() = VALOF
{ all := 1
  FOR i = 1 TO 12 DO
    { count := 0
      try(0, 0, 0)
      writef("Number of solutions to %i2-queens is %i5*n", i, count)
      all := 2*all + 1
    }
  RESULTIS 0
}
\end{verbatim}
}

\section{Tables}

```

```

\begin{samepage}
Here is a simple example\footnote{A footnote} of a table.

\begin{center}
\begin{tabular}{l|c|r}
Left      & Centred & Right \\
Justified &         & Justified \\
\hline
First     & A       & XXX \\
Second    & AA      & XX \\
Last      & AAA     & X
\end{tabular}
\end{center}

\noindent
There is another example table in the proforma.
\end{samepage}

\section{Simple diagrams}

Simple diagrams can be written directly in \LaTeX. For example, see
figure~\ref{latexpic1} on page~\pageref{latexpic1} and see
figure~\ref{latexpic2} on page~\pageref{latexpic2}.

\begin{figure}
\setlength{\unitlength}{1mm}
\begin{center}
\begin{picture}(125,100)
\put(0,80){\framebox(50,10){AAA}}
\put(0,60){\framebox(50,10){BBB}}
\put(0,40){\framebox(50,10){CCC}}
\put(0,20){\framebox(50,10){DDD}}
\put(0,00){\framebox(50,10){EEE}}

\put(75,80){\framebox(50,10){XXX}}
\put(75,60){\framebox(50,10){YYY}}
\put(75,40){\framebox(50,10){ZZZ}}

\put(25,80){\vector(0,-1){10}}
\put(25,60){\vector(0,-1){10}}
\put(25,50){\vector(0,1){10}}
\put(25,40){\vector(0,-1){10}}
\put(25,20){\vector(0,-1){10}}

\put(100,80){\vector(0,-1){10}}
\put(100,70){\vector(0,1){10}}
\put(100,60){\vector(0,-1){10}}
\put(100,50){\vector(0,1){10}}

\put(50,65){\vector(1,0){25}}
\put(75,65){\vector(-1,0){25}}
\end{picture}
\end{center}
\caption{A picture composed of boxes and vectors.}
\label{latexpic1}
\end{figure}

\begin{figure}
\setlength{\unitlength}{1mm}
\begin{center}

\begin{picture}(100,70)
\put(47,65){\circle{10}}
\put(45,64){abc}

\put(37,45){\circle{10}}
\put(37,51){\line(1,1){7}}

```

```

\put(35,44){def}

\put(57,25){\circle{10}}
\put(57,31){\line(-1,3){9}}
\put(57,31){\line(-3,2){15}}
\put(55,24){ghi}

\put(32,0){\framebox(10,10){A}}
\put(52,0){\framebox(10,10){B}}
\put(37,12){\line(0,1){26}}
\put(37,12){\line(2,1){15}}
\put(57,12){\line(0,2){6}}
\end{picture}

\end{center}
\caption{A diagram composed of circles, lines and boxes.}
\label{latexpic2}
\end{figure}

\section{Adding more complicated graphics}

The use of \LaTeX\ format can be tedious and it is often better to use
encapsulated postscript (EPS) or PDF to represent complicated graphics.
Figure~\ref{epsfig} and~\ref{xfig} on page \pageref{xfig} are
examples. The second figure was drawn using \texttt{xfig} and exported in
\{\tt.eps\} format. This is my recommended way of drawing all diagrams.

\begin{figure}[tbh]
\centerline{\includegraphics{figs/cuarms.pdf}}
\caption{Example figure using encapsulated postscript}
\label{epsfig}
\end{figure}

\begin{figure}[tbh]
\vspace{4in}
\caption{Example figure where a picture can be pasted in}
\label{pastedfig}
\end{figure}

\begin{figure}[tbh]
\centerline{\includegraphics{figs/diagram.pdf}}
\caption{Example diagram drawn using \texttt{xfig}}
\label{xfig}
\end{figure}

\chapter{Evaluation}

\section{Printing and binding}

Use a ‘‘duplex’’ laser printer that can print on both sides to print
two copies of your dissertation. Then bind them, for example using the
comb binder in the Computer Laboratory Library.

Diploma in Computer Science Project Proposal

Synthesis of Heart-Rate Detection Methods

December 18, 2019

Project Originator: Dr Robert Harle

Project Supervisor: *Dr Robert Harle*

Signature:

Signature:

Overseers: *Dr Anil Madhavapeddy and Professor John Daugman*

Signatures: *<no need to obtain Overseers' signatures yourself>*

Introduction and Description of the Work

Heart-rate signals from watches are unreliable while exercising. Watches make use of photoplethysmography (PPG) sensors - sensors which detect the volume of blood in the skin and use variances in this to reconstruct a heart-rate. PPG sensors are preferred to the more accurate electrocardiogram (ECG) due to user comfort. However, the signals they provide are harder to process - I want to compare strategies to process these signals to extract heart rate.

There are several sources of noise within a PPG signal. There is often high frequency contamination caused by electrical interference or light from external sources. Additionally, there is a constant low frequency variation in the DC background of the signal, as a result of capillary density, blood volume and temperature variations.

In the context of running, motion caused by the arms swinging forward and back causes the sensor to slide along the skin, creating motion artifacts (MAs). These are particularly challenging as they can have a much larger amplitude than the pulse we are looking for. Additionally, they can be at the same frequency as the heart rate signal, making them challenging to filter out. Therefore, there is research [1][2] that suggests using accelerometer data in order to predict MAs. I will implement algorithms which find the MAs based on data from the accelerometer. Following this, I will look into the implementation of filters to remove these MAs.

In order to get accurate heart-rate measurements with which to compare the PPG signals, I will make use of a chest-mounted portable ECG. I will need to synchronize the signals received from the ECG and PPG, due to clock skew between the different devices. Potentially, there could be drift between the two clocks as well.

Figure 1: PPG signals before and after filtering [3]

Starting Point

Wearable Development

I will need to develop an application for the smart watch which will record PPG and motion signals without interruption. I will use Android Studio and Kotlin.

I have never used Kotlin before and have used Android Studio once before, but never to develop something for a wearable.

Digital Signal Processing

Manipulation of the PPG signals I receive will require much digital processing, and there are two languages I am considering using: MATLAB and Python.

I have never used MATLAB before, but I am familiar with Python.

Substance and Structure of the Project

Core

1. Developing a wearable application to capture PPG signals and motion data. I would like to develop this using Android Studio and Kotlin. I will need to make use of wake locks in order to ensure that the application can continuously record data.
2. Collecting data using a PPG-enabled watch and a portable ECG. I will record my heartbeat over the course of several runs.
3. Synchronizing signals. Implementation of an algorithm to synchronize the data output from the watch records to the data output from the portable ECG. I will have to develop a program to find the lag between the two signals.
4. Removing noise. Due to the various sources of noise, I will investigate potential low and high pass filters, to remove both high and low frequency disturbance.
5. Peak finding - implementing algorithms to find the actual beat given a clean PPG signal. Some potential algorithms are:
 - (a) Adaptive threshold [4]
 - (b) Wavelet transformation [5]
6. Finding MAs - implement an algorithm which uses the accelerometer in order to detect segments of the PPG which are likely to have been affected by motion.

7. Removal of MAs - implementation of filters to remove the previously detected MAs.

Possible Extensions

- Investigating PPG-enabled earbuds
 - Evaluation of the quality of heart-rate provided by earbuds
 - Exploring the potential to merge signals from a smartwatch and earbuds in order to provide a higher quality signal.
- There is research [6] to suggest gyroscope information is also helpful in filtering out MAs. I could include gyroscope data in my MA filtering technique.
- Comparing more heart-rate detection algorithms:
 - Digital filters
 - Adaptive filters

Success Criteria

The following should be achieved:

- Develop an application which records and stores PPG signals on a watch.
- Create program which synchronises ECG signals with PPG signals.
- Implement at least two filtering algorithms, demonstrate filtering works by displaying signals before and after filtering.
- Implement at least two peak finding algorithms, demonstrate they work by comparing peaks on the PPG signal to peaks on the ECG signal.
- Implement a MA detection algorithm.
- Be able to remove MAs, demonstrating that the peak finding algorithm is not affected by signals caused by motion.

Resources Required

I will use my own laptop. I will regularly backup my project to GitHub and an external HDD, so that I can recover data in the event of hardware failure. I accept full responsibility for this machine and and I have made contingency plans to protect myself against hardware and/or software failure.

I will use a smart watch, and a chest-mounted ECG sensor in order to collect data.

Timetable and Milestones

Weeks 1-2 (28/10/19 - 10/11/19)

- Project set-up:
 - Installation and setup of Android Studio.

- Investigate and install an IDE for Python or MATLAB.
- Use GitHub to set up a backup system for the project.
- Learn to use Kotlin for the wearable app.
- Create a wearable app to record and store PPG and motion data, using Android Studio and Kotlin. Research into wake logs and interface design.
- Additionally, test application by recording data while running.

Weeks 3-4 (11/11/19 - 24/11/19)

- Collect data from runs.
- Build program to synchronize data between ECG and PPG (based on either heart rate variation or motion information).
- Researching and then implementing filters to remove both high and low frequency noise from the PPG signal.

Weeks 5-6 (25/11/19 - 08/12/19)

- Implement program to detect peaks in the signal.
- Begin writing dissertation document.

I will take the next week off.

Weeks 7-8 (16/12/19 - 29/12/19)

- Implement MA detection algorithm.
- Continue writing dissertation.

Weeks 9-10 (30/12/19 - 12/01/20)

- Implement MA removal algorithm.
- Continue writing dissertation.

Weeks 11-12 (13/01/20 - 26/01/20)

- Begin extension work, testing earbud HR detection against wrist-watches and portable ECGs.
- Continue writing dissertation.

Friday 31st January - Progress Report due

Weeks 13-14 (27/01/20 - 09/02/20)

- Extension work, testing whether earbud HR can be merged with wristwatch signal to create a more accurate output.
- Continue writing dissertation.

Weeks 15-16 (10/02/2020 - 23/02/2020)

- Extension work, including gyroscope feedback into the MA detection algorithm.
- Continue writing dissertation.

Weeks 17-18 (24/02/2020 - 08/03/2020)

- Extension work, including gyroscope feedback into the MA detection algorithm.
- Continue writing dissertation.

Weeks 19-20 (09/03/2020 - 22/03/2020)

- Writing dissertation.

Weeks 20-21 (23/03/2020 - 05/04/2020)

- Writing dissertation, aim to have first draft by second week of Easter holiday.

Weeks 22-26 (06/04/2020 - 08/05/2020)

- Continue improving dissertation.
- Leaving time for exam preparation.

Final deadline for dissertation 08/05/2020
